Navigating Seismic Shifts

May 20, 2021

The COVID-19 pandemic accelerated changes that were already taking place in capital markets. We are seeing huge swings away from long-term fundamental value, and as macro investors we seek to take advantage of these seismic shifts for the benefit of our clients.

Watch the video or read the recap below.

It’s been a recurring observation that the coronavirus pandemic accelerated changes that were already taking place and pushed things further in the direction that they were already moving.

In my investment space, which is the top-down capital market world, the same can be observed. Central banks and the world’s monetary authorities were already very accommodative or expansionary coming into 2020 and COVID-19 only made them ramp up their efforts ever more aggressively everywhere.

And this last year has taken the price of some assets to levels of fundamental attractiveness—cheaper than they’re worth—that are greater than have been seen for many years. Whilst at the same time it has pushed some prices to levels that are the most unattractive that we have ever seen as well—much more expensive than they are ultimately going to be worth.
These are seismic shifts in the marketplace. They are huge swings away from fundamental value, and as macro investors we want to observe them, understand them, figure out why they are there, and ultimately take advantage of them for the benefit of our clients.

And as market prices move in accordance with changes in the macro environment—and the economic impact of the coronavirus pandemic was a very significant shift in the macro environment—this both facilitates the allocation of sources of capital around the world and it creates opportunities for our portfolios and our clients to benefit from the ultimate gravitation of prices back to fundamental value.

Navigating this landscape is the core of what we do.

Information and opinions expressed are those of the authors and may not reflect the opinions of other investment teams within William Blair Investment Management, LLC, or affiliates. Factual information has been taken from sources we believe to be reliable, but its accuracy, completeness or interpretation cannot be guaranteed. Information is current as of the date appearing in this material only and subject to change without notice.

Statements concerning financial market trends are based on current market conditions, which will fluctuate. This material may include estimates, outlooks, projections, and other forward-looking statements. Due to a variety of factors, actual events may differ significantly from those presented.

Investing involves risks, including the possible loss of principal. Equity securities may decline in value due to both real and perceived general market, economic, and industry conditions. The securities of smaller companies may be more volatile and less liquid than securities of larger companies. Investing in foreign denominated and/or domiciled securities may involve heightened risk due to currency fluctuations, and economic and political risks. These risks may be enhanced in emerging markets. Different investment styles may shift in and out of favor depending on market conditions. Individual securities may not perform as expected or a strategy used by the Adviser may fail to produce its intended result.

Investing in the bond market is subject to certain risks including market, interest rate, issuer, credit, and inflation risk. Rising interest rates generally cause bond prices to fall. High-yield, lower-rated, securities involve greater risk than higher-rated securities. Sovereign debt securities are subject to the risk that an entity may delay or refuse to pay interest or principal on its sovereign debt because of cash flow problems, insufficient foreign reserves, or political or other considerations. Derivatives may involve certain risks such as counterparty, liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Currency transactions are affected by fluctuations in exchange rates; currency exchange rates may fluctuate significantly over short periods of time. Diversification does not ensure against loss.

There can be no assurance that investment objectives will be met. Any investment or strategy mentioned herein may not be appropriate for every investor.
