

Blog Poll Results: Will Inflation Accelerate?

April 7, 2017

Our blog readers have weighed in on our U.S. inflation and emerging markets outlook blog poll, and here are the results:

- Most of our readers (75%) think that U.S. inflation will grow moderately over the next 18 months
- And about two-thirds of respondents have a neutral outlook on emerging markets, given the potential for rising U.S. inflation
- At the same time, one-third of our readers are positive on emerging markets

See the below infographic for complete results of our blog poll.

U.S. Inflation + Emerging Markets Outlook

U.S. Inflation Expectations

Inflation outlook over the next 18 months

Minimal

Moderate

Significant

Emerging Markets Outlook

Outlook on emerging markets, given the potential for rising U.S. inflation

Negative

Neutral

Positive

Olga Bitel, economist at William Blair.

Factual information has been taken from sources we believe to be reliable, but its accuracy, completeness or interpretation cannot be guaranteed. Information is current as of the date appearing in this material only and subject to change without notice. Statements concerning financial market trends are based on current market conditions, which will fluctuate. This material may include estimates, outlooks, projections, and other forward-looking statements. Due to a variety of factors, actual events may differ significantly from those presented.

Investing involves risks, including the possible loss of principal. Equity securities may decline in value due to both real and perceived general market, economic, and industry conditions. The securities of smaller companies may be more volatile and less liquid than securities of larger companies. Investing in foreign denominated and/or domiciled securities may involve heightened risk due to currency fluctuations, and economic and political risks. These risks may be enhanced in emerging markets. Different investment styles may shift in and out of favor depending on market conditions. Individual securities may not perform as expected or a strategy used by the Adviser may fail to produce its intended result.

Investing in the bond market is subject to certain risks including market, interest rate, issuer, credit, and inflation risk. Rising interest rates generally cause bond prices to fall. High-yield, lower-rated, securities involve greater risk than higher-rated securities. Sovereign debt securities are subject to the risk that an entity may delay or refuse to pay interest or principal on its sovereign debt because of cash flow problems, insufficient foreign reserves, or political or other considerations. Derivatives may involve certain risks such as counterparty, liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Currency transactions are affected by fluctuations in exchange rates; currency exchange rates may fluctuate significantly over short periods of time. Diversification does not ensure against loss.

There can be no assurance that investment objectives will be met. Any investment or strategy mentioned herein may not be appropriate for every investor.
